FOREWORD

The cumulative index for 1981-1985 follows the traditional model. The index covers the most recent twenty volumes of *Radiology*, including book reviews, editorials, letters to the editor, obituaries, opinions, special reports, and abstracts from many other medical journals. The major papers from ten additional radiological publications are listed; this year *Clinics in Diagnostic Ultrasound*, *Journal of Computer Assisted Tomography*, and *Journal of Ultrasound in Medicine* have been added to the list.

For this edition, many new terms have been added and some of the old ones combined (for the convenience of users, a complete list of terms can be found on pp. 797-813). We have used the abbreviations CT, MR, and US for computed tomography, magnetic resonance, and ultrasound when they are used as secondary index terms in the Subject Index. As usual, we have tried to identify a reasonable array of terms for each publication so that retrieval will be easy while the size of the volume is kept within bounds.

Special recognition is given to Claudia Gorman for her key role in preparation of the index.

William R. Eyler, M.D., *Editor*
